## **DETAILED ACTION**

## Specification

The amendment filed 2/25/08 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows:

The torque handle 262 is <u>directly mounted to the guide wire 28 and can be locked onto the guide wire via the cap 264</u>. This handle 262 allows the physician to manipulate and rotate the guide wire 28. The torque device 280 includes an extension arm 284 having a first end 282 which is attached

Applicant is required to cancel the new matter in the reply to this Office Action.

## Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 2, 4, 7-10, 12-14, and 18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The amendment including a locking means associated with the handle was not previously supported by the written disclosure, nor would it have been obvious to one of ordinary skill in the art

Application/Control Number: 10/675,611 Page 3

Art Unit: 3738

by looking at the figures. Furthermore it is still unclear from the figures how the cap enables the handle to lock onto the guidewire.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8-10 and 12-14 rejected under 35 U.S.C. 102 (b) as being anticipated by Okada ET al USPN 4,801,294.

Okada discloses the same invention as claimed being a torque device comprising a guidewire (1), a split seam sheath (3), handle (top plate) with a lumen (5) extending there through and a locking means (5'), a side-port (8) to remove the sheath from the guidewire, an extension arm (front plate 7) and an opening for receiving both the guidewire and sheath (shown best in figures 1-3).

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4, 7, and 15-23 are rejected under 35 U.S.C. 103 as being unpatentable over (FPD FR 2580504) Pieronne in view of (USPN 6,228,062) Okada et al and further in view of (USPN 6,616,680) Thielen.

Pieronne discloses the invention substantially as claimed being an embolic filtering system comprising an expandable filter frame (1), a filter element (11), and a split seam sheath (16). However, Pieronne does not disclose all the structural elements of the torque device or that the filter is self-expanding.

Okada teaches the use of a locking torque device described supra in the same field of endeavor for the purpose of guiding and uniformly separating a guidewire from its sheath without kinking.

Thielen teaches the use of a filter comprising nitinol for the purpose of providing a temperature sensitive self-expanding frame.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to add the torque device of Okada to the end of Pieronne and to incorporate the self-expanding nitinol frame material in order to provide the operator better control the separation sheath during its separation from the guidewire and a frame with enhanced expansion ability.

In regards to claim 22 it is inherent that the arm is integral with the lock because the entire torque device of Okada is a single integral structure.

In regards to claim 23 it is inherent that any portion is removable because it can be cut off or remove by any other known separating means.

# Response to Arguments

Applicant's arguments with respect to claims 1, 2, 4, 7-10, and 12-23 have been considered but are moot in view of the new ground(s) of rejection.

#### Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher D. Prone whose telephone number is (571) 272-6085. The examiner can normally be reached on Monday through Fri 8:30 to 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Corrine McDermott can be reached on (571) 272-4754. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
